Higher level
Paper 3 – calculus

Thursday 21 May 2015 (afternoon)

1 hour

Instructions to candidates

- Do not open this examination paper until instructed to do so.
- Answer all the questions.
- Unless otherwise stated in the question, all numerical answers should be given exactly or correct to three significant figures.
- A graphic display calculator is required for this paper.
- A clean copy of the **mathematics HL and further mathematics HL formula booklet** is required for this paper.
- The maximum mark for this examination paper is **[60 marks]**.

Please start each question on a new page. Full marks are not necessarily awarded for a correct answer with no working. Answers must be supported by working and/or explanations. In particular, solutions found from a graphic display calculator should be supported by suitable working. For example, if graphs are used to find a solution, you should sketch these as part of your answer. Where an answer is incorrect, some marks may be given for a correct method, provided this is shown by written working. You are therefore advised to show all working.

1. [Maximum mark: 7]

The function f is defined by $f(x) = e^{-x} \cos x + x - 1$.

By finding a suitable number of derivatives of f , determine the first non-zero term in its Maclaurin series.

2. [Maximum mark: 8]

(a) Show that $y = \frac{1}{x} \int f(x) dx$ is a solution of the differential equation

$$x \frac{dy}{dx} + y = f(x), \quad x > 0. \quad [3]$$

(b) Hence solve $x \frac{dy}{dx} + y = x^{-\frac{1}{2}}, \quad x > 0$, given that $y = 2$ when $x = 4$. [5]

3. [Maximum mark: 17]

(a) Show that the series $\sum_{n=2}^{\infty} \frac{1}{n^2 \ln n}$ converges. [3]

(b) (i) Show that $\ln(n) + \ln\left(1 + \frac{1}{n}\right) = \ln(n+1)$.

(ii) Using this result, show that an application of the ratio test fails to determine whether or not $\sum_{n=2}^{\infty} \frac{1}{n \ln n}$ converges. [6]

(c) (i) State why the integral test can be used to determine the convergence or divergence of $\sum_{n=2}^{\infty} \frac{1}{n \ln n}$.

(ii) Hence determine the convergence or divergence of $\sum_{n=2}^{\infty} \frac{1}{n \ln n}$. [8]

4. [Maximum mark: 12]

- (a) Use l'Hôpital's rule to find $\lim_{x \rightarrow \infty} x^2 e^{-x}$. [4]
- (b) Show that the improper integral $\int_0^{\infty} x^2 e^{-x} dx$ converges, and state its value. [8]

5. [Maximum mark: 16]

- (a) The mean value theorem states that if f is a continuous function on $[a, b]$ and differentiable on $]a, b[$ then $f'(c) = \frac{f(b) - f(a)}{b - a}$ for some $c \in]a, b[$.
- (i) Find the two possible values of c for the function defined by $f(x) = x^3 + 3x^2 - 2$ on the interval $[-3, 1]$.
- (ii) Illustrate this result graphically. [7]
- (b) (i) The function f is continuous on $[a, b]$, differentiable on $]a, b[$ and $f'(x) = 0$ for all $x \in]a, b[$. Show that $f(x)$ is constant on $[a, b]$.
- (ii) Hence, prove that for $x \in [0, 1]$, $2 \arccos x + \arccos(1 - 2x^2) = \pi$. [9]
-
